LIBRARY

- Cloud is divided in Public and Private.
You can drag and drop from your library to stage at any time.

All the assets of the website are accesible located in a our private
library, and then can be set to Public to share them online.

In the public library there is all kind of Components useful for our
basic from a basic div to a complex hastag reader. yo can also put
up your own components if you want to or read or modify the
structure if you want.

-

CLOUD KEY FEATURES

- Having a big amount of node servers running at the same time opens a wide spectrum of posibilities.

Nodo wants to wire all the servers connected to the network make them share the workload even more intelligently.

Also the plaform should be able to self update.

THE POWER OF OBJECTS

- In NODO everything will be created by encapsulated objects

- NODO will be a single JS object that will allow us to edit any content using the editor. When done he will send the order to the server who will rewrite the new modifications of the base code. Taking care of mixings animations and everything we want to change in our website structure.

NODO EDITOR

- Extending his functionalities will be also possible to run in existing websites, just installing nodo and giving login will let nodo to parse the website structure and let you change the content that you already have re-writing the file structure.

NODO could analyse and correct crossbrowser and mixin issues, becoming the most powerful authoring tool existing.

DYNAMIC

- Giving NODO the ability to work with databases is a serious matter

- Trough components the abitly to read and write integrating with noSQL databases

- Google Docs integration

- Creation Private pages

- Standard Web protocols

COMPONENTS

- There is endless posibilites and clear guidelines allow any developer
to produce new encapsulated components. like :
    - DIVS,Iframes and other html tags
    - Assets like backgrounds
    - UI items: Slideshows, hastags feeds,
    - Contact Form & registration form/ login
    - Free form
